

Geo-Block UK/EU — Cloudflare WAF Rule

Step 1: Create the WAF custom rule

1. Go to dash.cloudflare.com -> Select your domain -> **Security** -> **WAF** -> **Custom rules**
2. Click **Create rule**
3. Name it: Block UK and IE traffic
4. Expression:

```
(ip.geoip.country in {"GB" "IE"})
```

5. Action: **Block**
6. Click **Deploy**

Alternative: Return HTTP 451 (Unavailable For Legal Reasons)

If you prefer a 451 status instead of a generic block:

1. Same path: **Security** -> **WAF** -> **Custom rules**
2. Expression:

```
(ip.geoip.country in {"GB" "IE"})
```

3. Action: **Managed Challenge** or **Block**
4. (Cloudflare does not natively support custom HTTP status codes in free WAF rules. For 451, you would need a Worker. The Block action is sufficient for GDPR shielding.)

Verification

After deploying, visit your site from a UK VPN or use:

```
curl -I https://how-law-can-you-go.pages.dev/entry/survival-001 -H "CF-IPCountry: GB"
```

You should see HTTP/2 403 or the block page.
